DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 2 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because prior art fails to teach or make obvious an apparatus for generating a high energy X-ray beam comprising: a synchronizer controlling an injector modulator and amplifier modulator to ensure that an accelerating section receives a first stream of pulses of RF waves as a designated stream of pulses of RF waves and an electron beam generated from a first voltage pulse or a second stream of pulses of RF waves as the designated stream of pulses of RF waves and an electron beam generated from a second voltage pulse as claimed including all of the limitations of the claim 1.

Claim 2 is allowed because prior art fails to teach or make obvious a method for generating a high energy x-ray beam comprising the steps of: generating a high energy X-ray beam with spectra from an electron current pulse; alternating the use of a first voltage pulse and a second voltage pulse to generate an electron beam; and alternating the use of a first stream of pulses of RF waves and a second stream of pulses of RF waves as a designated stream of pulses of RF waves as claimed including all of the limitations of the claim 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Miller (US Patent 5,608,403), Bertshe (US Patent 6,407,505 B1), Hanna et al. (US patent 6,483,263 B1), Annis (US Patent 5,666,393), Grodzins et al. (US Patent 6,151,381) and Chung et al. (US Patent 6,327,339 B1) teach the RF linear electron accelerators used for producing the high-energy x-ray beams.
